# VOTE YES FOR THE FUTURE!

ItaliaEuropa

Liberi da Ogm

GMOs are incompatible and unacceptable. We are seeking your vote so that Italy's development in the agro-food sector (and the country's development in general) may be modern, innovative, focused on quality of life, health and biodiversity, and be safe and respectful of the environment and the climate.

Help us promote this consultation! Contact us to organise events and learn about our events and where our nearest offices are. Alternatively you may vote online at the following address:  
[www.liberidaogm.org](http://www.liberidaogm.org)

From 15 September to 15 November 2007, during hundreds of events and initiatives held across Italy, you will have the chance to vote yes for a quality agro-food model, closely tied to your region and its history and above all free from genetically modified organisms

**Eat well and healthy: this is what Italy** has to offer through its extraordinary variety of regional, wholesome and quality agro-food products; products that are so rich in history and that the whole world appreciates, buys and even tries to reproduce.

By placing the agro-food sector, food-stuffs and food authenticity at the centre of development, our country will not be damaged by international constraints and will be able to contribute

in an original way to the diversified and democratic globalisation we need.

The same principle holds true for the European Union. From this standpoint **GMOs are incompatible and unacceptable: GMOs would be economically inefficient and, more so, would standardise our products and deprive us of their exceptional quality.**

The future of Italy is starting with this unusual coalition that brings together organisations representing farmers, large distribution, small and medium sized businesses, consumer, environmental, scientific, cultural and international cooperation interest groups.

Together we have promoted a **national consultation** to get you involved: this is your opportunity to take part in

a truly democratic participation aimed at building a new social contract that will change things both in Rome as well as in Brussels.

**We are seeking your vote so that Italy's development in the agro-food sector (and the country's development in general) may be modern, innovative, focused on quality of life, health and biodiversity, and be safe and respectful of the environment and the climate.**

**Your vote, and Your participation are at the base of our common future!**
